3 GENERAL NOTES

QVHZO-A* and QVKZOR-A* proportional valves are CE marked according to the applicable Directives (e.g. Immunity/Emission EMC Directive and Low Voltage Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in table F003 and in the installation notes supplied with relevant components.

4 FIELDBUS - only for AES

Fieldbus allows valve direct communication with machine control unit for digital reference, valve diagnostics and settings. These execution allow to operate the valves through fieldbus or analog signals available on the main connector. For detailed information about fieldbus features and specification see tech table **GS510**.

5 MAIN CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

Assembly position	Any position							
Subplate surface finishing	Roughness inde	Roughness index, Ra 0,4 flatness ratio 0,01/100 (ISO 1101)						
MTTFd valves according to EN ISO 13849	150 years, see	technical	table P	007				
Ambient temperature range	A: sta	andard =	-20°C -	- +70°C,	/BT option = -4	40°C ÷ -	+60°C	
	AEB, AES: sta	andard =	-20°C -	÷ +60°C,	/BT option = -4	40°C ÷ -	+60°C	
Storage temperature range	A: sta	andard =	-20°C -	÷ +80°C,	/BT option = -4	40°C ÷ -	+70°C	
	AEB, AES: sta	andard = ·	-20°C -	+70°C,	/BT option = -4	40°C ÷ -	+70°C

8 APPLICATIONS AND CONNECTIONS

2 way connection

The 2 way connection is normally used to control the flow in one part of the hydraulic circuit or to regulate the speed of a specific actuator. The metered flow in the controlled line is kept constant, independently to the load variations

If the valve is directly installed on the pump main line, the exceeding flow is returned to tank though the pressure relief valve.

3 way connection

The 3 way connection is normally used when the valve directly controls the pump flow (main line)

The metered flow in the controlled line is kept constant, independently to the load variations

The exceeding flow (not metered by the valve) it is returned to tank trough the valve P port = T line (3rd way)

Priority connection

The priority connection guarantees the pressure compensated flow supply to the primary circuit.

The exceeding flow (not required by the primary circuit) is bypassed through the valve P port, to secondary circuit operating at lower pressure and not requiring compensated flow regulations.

9 HYDRAULIC OPTIONS

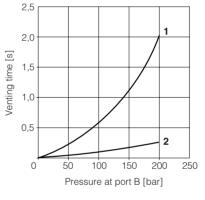

9.1 Option /D

This option provides a quick venting of the use port B when the valve is closed or de-energized. The valve must be connected in 3 way, with P port connected to tank

When the proportional throttle is fully closed, the valve's port B is internally connected to port P (tank), permitting a quickly decompression of the pressure in the use line.

In the diagram aside are represented the venting times of **QVHZO** and **QVKZOR** option /**D** respect to standard versions.

- 1 = standard versions
- **2** = option /Q

10 OPTIONS for -A

10.1 Coil voltage

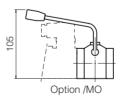

Option /6 optional coil to be used with Atos drivers with power supply 12 VDc Option /18 optional coil to be used with electronic drivers not supplied by Atos

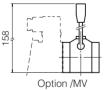

10.2 Hand lever only for QVHZO-A

It allows to operate the valve in absence of electrical power supply. For detailed description of QVHZO-A with hand lever option see tech. table E138

Option /MO horizontal hand lever

Option /MV vertical hand lever

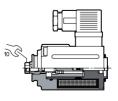

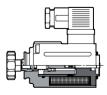

The following supplementary options allow to operate **QVHZO-A** and **QVKZOR-A** in absence of electrical power supply by means of a micrometric screw replacing the standard solenoid manual override, see tech. table TK150

Option /N manua	l micrometric	adjustment
-----------------	---------------	------------

Option /NV as /N plus handwheel and graduated scale

Option /N

Option /NV

11 ELECTRONIC OPTIONS for AEB and AES

Standard driver execution provides on the 7 pin main connector:

 - 24 VDC must be appropriately stabilized or rectified and filtered; 2,5 A fuse time lag is required in series to each driver power supply Apply at least a 10000 μF/40 V capacitance to single phase rectifiers or a 4700 μF/40 V capacitance to three phase rectifiers

Reference input signal - analog differential input with ±10 VDC nominal range (pin D, E), proportional to desired coil current

Monitor output signal - analog output signal proportional to the actual valve's coil current (1V monitor = 1A coil current)

Note: a minimum booting time of 500 ms has be considered from the driver energizing with the 24 VDC power supply before the valve has been ready to operate. During this time the current to the valve coils is switched to zero.

11.1 Option /I

Power supply

It provides 4 \div 20 mA current reference signal, instead of the standard 0 \div +10 V.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V or ±20 mA.

It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.

11.2 Option /Q

To enable the driver, supply 24 VDC on pin C referred to pin B: Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to maintain active the communication and the other driver functions when the valve has to be disabled. This condition does not comply with European Norms EN13849-1 (ex EN954-1).

11.3 Option /Z

It provides, on the 12 pin main connector, the following additional features:

Enable Input Signal

To enable the driver, supply 24 VDC on pin 3 referred to pin 2: Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to maintain active the communication and the other driver functions when the valve has to be disabled. This condition does not comply with European Norms EN13849-1 (ex EN954-1).

Fault Output Signal

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for 4÷20mA input, etc.). Fault presence corresponds to 0 VDC, normal working corresponds to 24 VDC (pin 11 referred to pin 2): Fault status is not affected by the Enable input signal

Power supply for driver's logics and communication

Separate power supply (pin 9,10) allow to cut solenoid power supply (pin 1,2) while maintaining active diagnostics, USB and fieldbus communication. A safety fuse is required in series to each driver power supply: 500 mA fast fuse.

11.4 Option /W

It provides, on the 12 pin main connector, the above option /Z features plus the hydraulic power limitation function.

The driver receives the flow reference signal by the analog input INPUT+ and a pressure transducer, installed in the hydraulic system, has to be connected to the driver's analog input TR.

When the actual requested hydraulic power pxQ (TR x INPUT+) reaches the max power limit (p1xQ1), internally set by software, the driver automatically reduces the flow regulation of the valve. The higher is the pressure feedback the lower is the valve's regulated flow:

Flow regulation = Min (_____ PowerLimit [sw setting] ; Flow Reference [INPUT+])

Transducer Pressure [TR]

For detailed information on hydraulic power limitation, see tab. GS115

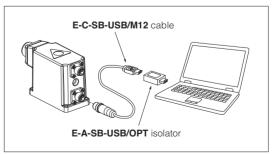

11.5 Option /C - only in combination with option /W

Option /C is available to connect pressure transducer with $4 \div 20$ mA current output signal, instead of the standard $0 \div 10V$. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ± 10 V or ± 20 mA.

11.6 Possible combined options: /IQ, /IZ, /IW, /CW and /CWI

12 PROGRAMMING TOOLS - see tech table GS500

USB connection

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver. For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus.

The software is available in different versions according to the driver's options:

E-SW-BASIC support:	NP (USB)	PS (Serial)	IR (Infrared)
E-SW-FIELDBUS support:	BC (CANopen)	BP (PROFIBUS DP)	EH (EtherCAT)
	EW (POWERLINK)	EI (EtherNet/IP)	. ,

E-SW-*/PQ support: valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ) WARNING: drivers USB port is not isolated!

The use of isolator adapter is highly recommended for PC protection (see table GS500)

13 ELECTRONIC CONNECTIONS

13.1 Main connector signals - 7 pin - standard and /Q <code>options</code> - AEB and AES $\widehat{(A1)}$

PIN	Standard	/Q	TECHNICAL SPECIFICATIONS	NOTES
Α	A V+		Power supply 24 Vbc Rectified and filtered: VRMs = 20 ÷ 32 VMAX (ripple max 10 % VPP)	Input - power supply
В	В V0		Power supply 0 Vbc	Gnd - power supply
С	AGND		Analog ground	Gnd - analog signal
		ENABLE	Enable (24 Vbc) or disable (0 Vbc) the driver, referred to V0	Input - on/off signal
D INPUT+			Reference input signal: ± 10 Vpc / ± 20 mA maximum range Defaults are 0 \div +10 Vpc for standard and 4 \div 20 mA for /I option	Input - analog signal Software selectable
Е	E INPUT-		Negative reference input signal for INPUT+	Input - analog signal
F	F MONITOR referred to: AGND V0		Monitor output signal: ±5 Vbc maximum range Default is 0 ÷ +5 Vbc (1V = 1A)	Output - analog signal Software selectable
G	G EARTH		Internally connected to driver housing	

13.2 Main connector signals - 12 pin - /Z and /W options - AEB and AES A2

PIN	/Z	/W	TECHNICAL SPECIFICATIONS	NOTES
1	V+		Power supply 24 VDc Rectified and filtered: VRMS = 20 ÷ 32 VMAX (ripple max 10 % VPP)	Input - power supply
2	V0		Power supply 0 Vpc	Gnd - power supply
3	ENABLE		Enable (24 VDc) or disable (0 VDc) the driver, referred to V0	Input - on/off signal
4	4 INPUT+		Reference input signal: ± 10 Vpc / ± 20 mA maximum range Defaults are 0 \div +10 Vpc for standard and 4 \div 20 mA for /I option	Input - analog signal Software selectable
5	INPUT-		Negative reference input signal for INPUT+	Input - analog signal
6	MONITOR		Monitor output signal: ±5 Vbc maximum range, referred to VL0 Default is 0 ÷ +5 Vbc (1V = 1A)	Output - analog signal
7	NC		Do not connect	
8	NC		Do not connect	
0		MONITOR2	2nd monitor output signal: ±5 Vpc maximum range, default is 0 ÷ 5 Vpc	Output - analog signal
9	VL+	•	Power supply 24 Vbc for driver's logic and communication	Input - power supply
10	VL0		Power supply 0 Vbc for driver's logic and communication	Gnd - power supply
11	FAULT		Fault (0 Vbc) or normal working (24 Vbc), referred to V0	Output - on/off signal
PE	EARTH		Internally connected to driver housing	

13.3 Communication connectors - AEB B and AES B - C

В	USB connector - M12 - 5 pin always present			
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)		
1	+5V_USB	Power supply		
2	ID	Identification		
3	GND_USB	Signal zero data line		
4	D-	Data line -		
5	D+	Data line +		

C2	©2 BP fieldbus execution, connector - M12 - 5 pin (2)					
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)				
1	+5V	Termination supply signal				
2	LINE-A	Bus line (high)				
3	DGND	Data line and termination signal zero
