

JANUS CONTROL VALVE RELIEF VALVE

A patented range of valves which can control the pressure of corrosive fluids in hydraulic systems. Designed specifically for fluids with low viscosity, the valve offers accurate control with high resistance to flow erosion experienced in pressure control applications. The valve fully conforms to the Pressure Equipment Directive and can include internal burst disc assemblies for safety applications.

SPECIFICATION	
Max Inlet Pressure	180 Bar
Operating Pressure Range	1 10 to 30 Bar 2 70 to 160 Bar 3 >160 bar 4 25 to 100 Bar
Flow Range	- DN3 0-10 L/min - DN6 0-30 L/min - DN12 0-120 L/min - DN16 0-450 L/min
Construction Materials	316 Stainless Steel Polymer or Ceramic
Media	Water

Seals

Standard valves are supplied with Nitrile seals however, alternatives are available on request.

Noise

The valve offers very low noise output even when relieving at high system pressures. The usual high pitch "squeal" associated with water relief valves is not generated with this range of valves.

Relief Setting

The operating pressure range must be specified on all orders. Not only the spring force varies with pressure but also the actuation piston is sized to give both accuracy and precision in low, medium and high pressure valves.

Drip rate

The valves do not offer 100% seal below set pressure. A drip rate when operating at 75% of its set pressure will result.
